- **Real-World Application of Multimodal Learning on Speech Enhancement (SE) [1, 2]**
 - Improved the applicability of DL-based models on embedded systems.
 - Confirmed the usefulness of lip images, both compressed and non-compressed.
 - Addressed asynchronous and low-quality multi-data problems.
- **Self-Supervised Multimodal Learning**
 - Applied a denoising autoencoder with linear regression decoder to audio-only SE and audio-visual SE.
 - Both situations contain only unlabeled data.
